メラユグリッド：言語サービスを通して文化的な違いに橋を架ける

Melayu Grid: Bridging Cultural Difference Through Language Service

概要

The Melayu Grid project is a practical approach in culture grid to balance cultural similarities and differences between Indonesia and Malaysia. The application is implemented by wrapping available online language resources between Indonesian, Malaysian and regional languages. The same words having different meaning and connotation will be wrapped as warning list. Some claimed heritages and cultures terms will be wrapped as sensitive service. This project will conduct an experiment amongst representatives of 100 Indonesian students and 30 Malaysian students currently living in Kyoto. This project will be evaluated with user-centered QoS technique.

産業界への展開例・適用分野

Culture grid has been a hot topic in computer supported collaboration work research. However, none of the current work in culture grid involves Web service technology. Having Melayu Grid implemented as service grid, a federated processing with other service grids, such as Language Grid and e-Learning Grid, could be realized.
